Futon on Apache CouchDB 1.6.1

Funciones

Función que muestra el número del estado de los autos

The screenshot shows the Apache CouchDB Futon interface in a Google Chrome browser. The address bar indicates the URL is `localhost:5984/_utils/database.html?carro/_temp_view`. The main content area displays a temporary view for the `carro` database. The view is configured with a Map Function and a Reduce Function. The Map Function is a JavaScript function that iterates over the `carro` array and emits the `carro.Estado` value. The Reduce Function is a simple `_count` function. The view results are displayed in a table with columns for Key and Value. The table shows four rows: "Bueno" with a value of 4, "Malo" with a value of 6, "Medio" with a value of 3, and "Melo" with a value of 1. The interface also includes a sidebar with navigation links for Tools, Documentation, and Diagnostics, and a footer with a welcome message and version information.

Overview > **carro**

Jump to: View: Temporary view... Stale views ☐

+ New Document ⓘ Security...
⊖ Compact & Cleanup... ✖ Delete Database...

▼ View Code

Map Function:	Reduce Function (optional):
<pre>function(carro){ if(carro.Estado){ emit(carro.Estado); } }</pre>	<pre>_count</pre>

Run Language: javascript Revert Save As... Save

Warning: Please note that temporary views are not suitable for use in production, as they are really slow for any database with more than a few dozen documents. You can use a temporary view to experiment with view functions, but switch to a permanent view before using them in an application.

Key ▲	Grouping: exact ▼	Value	Reduce <input checked="" type="checkbox"/>
"Bueno"		4	
"Malo"		6	
"Medio"		3	
"Melo"		1
